

Note

The following summary Table, produced daily, provides traffic trend information derived from a small sample set of traffic counters located on the national road network.

The information below covers the morning period from 7am until 10am. The trend for car traffic from this period of the day generally correlates closely with the overall daily trend in car traffic at each location.

Introductory Remarks

- From Tuesday 21st April, an upward trend in car traffic volumes became apparent. In response, daily traffic figures were provided by TII from 29th April in order to more closely monitor traffic trends. Traffic figures were measured from 7am to 10am so as to provide an early indicator each day.
- Weekly heavy goods vehicle traffic had remained largely stable and accordingly the daily figures provided were for cars only.
- The changes recorded day-to-day are not cumulative – they compare only the current day’s figures versus the same day in the previous week and the same day last year.
- With the introduction of countrywide Level 3 restrictions from midnight on Friday 9th October, TII has again reverted to providing a daily update.
- From Friday 16th October, following the introduction of Level 4 restrictions in the border counties of Cavan, Monaghan and Donegal, counters close to the border on the N2, N3, N13, N15 and N16 have been added.

Daily Data for Friday 30th October

- Overall, car traffic today is typically down by between -31% and -51% of the volumes of one year ago, across the sampled traffic counters. Today’s car traffic reductions are likely to be in part impacted by the school mid-term.
- Car traffic just south of the Northern Ireland Border on the N1 at Jonesboro shows an increase today of +37% as compared with Friday 23rd October and a decrease by -43% since the start of the Level 3 restrictions on 5th October.
- In the case of the non-motorway border counter sites, traffic volumes today vary by between -6% and -19% as compared with Friday of last week and by between -31% and -34% since 5th October. It should be noted that traffic volumes at the N2, N3, N14, N15 and N16 counters are lower than at the motorway traffic counters and are likely to display wider fluctuations in traffic figures than other traffic counters.
- Car traffic volumes on the radial routes into Dublin this morning generally show a decrease as compared with Friday of last week. Car traffic is down -9% on the N7 at Citywest, -10% on the M4 at Celbridge-Maynooth, -10% on the M1 at Swords to Airport and -21% on the M11 at Bray.
- The M50 (N3 Navan Road to N4 Galway Road) shows a -10% decrease as compared with Friday 23rd October. This reflects the general decrease in peak time car traffic volumes on the radial approaches to the city.
- In the case of the regional cities there is a significant decrease in car traffic volumes this morning as compared with Friday 23rd October. The traffic volume changes are as follows: M9 Waterford -7%, N6 Bóthar na dTreabh Galway -8%, N40 Cork -15% and M7 Limerick -17%. These figures are very consistent with yesterday’s figures from the regional cities.
