Questions and Answers

WHAT IS SAFE SYSTEM?

This is the *generic term* of a collection of similar concepts/visions:

- Vision Zero
- Towards Zero
- Sustainable Safety
- Safe System

All agree that :

- human beings make mistakes,
- human body has a limited physical ability,
- shared responsibility.

DEVELOPMENT OF THE SAFE SYSTEM APPROACH

Safe System approach builds upon the ground-breaking road safety efforts of the **Netherlands** and **Sweden**.

NETHERLANDS *SUSTAINABLE SAFETY*

SWEDEN'S *VISION ZERO*

Paradigm Shift – 1990's!

Questions and Answers

RSA.ie Road Safety Strategy

The Safe Systems Approach (Chapter 5)

.....this Strategy presents a more holistic approach to road safety, which builds on existing road safety interventions, but reframes the way in which road safety is viewed and managed in the community. This is called the Safe Systems approach and its key principles are outlined in this chapter.

Strategy, called 'Closing the Gap' 2013 to 2020

New RSS 2021 to 2030 will have a much stronger Safe Systems Approach focus.

Brussels, 19.6.2019
SWD(2019) 283 final

COMMISSION STAFF WORKING DOCUMENT

EU Road Safety Policy Framework 2021-2030 - Next steps towards "Vision Zero"

**... implement the
"Safe System"
at EU level.**

*This approach, derived from European best practice and now recommended globally by the **World Health Organisation**, reframes road safety policy by focussing it on preventing deaths and serious injuries (EC, 2019)*

AIM:

VISION ZERO via SAFE SYSTEMS

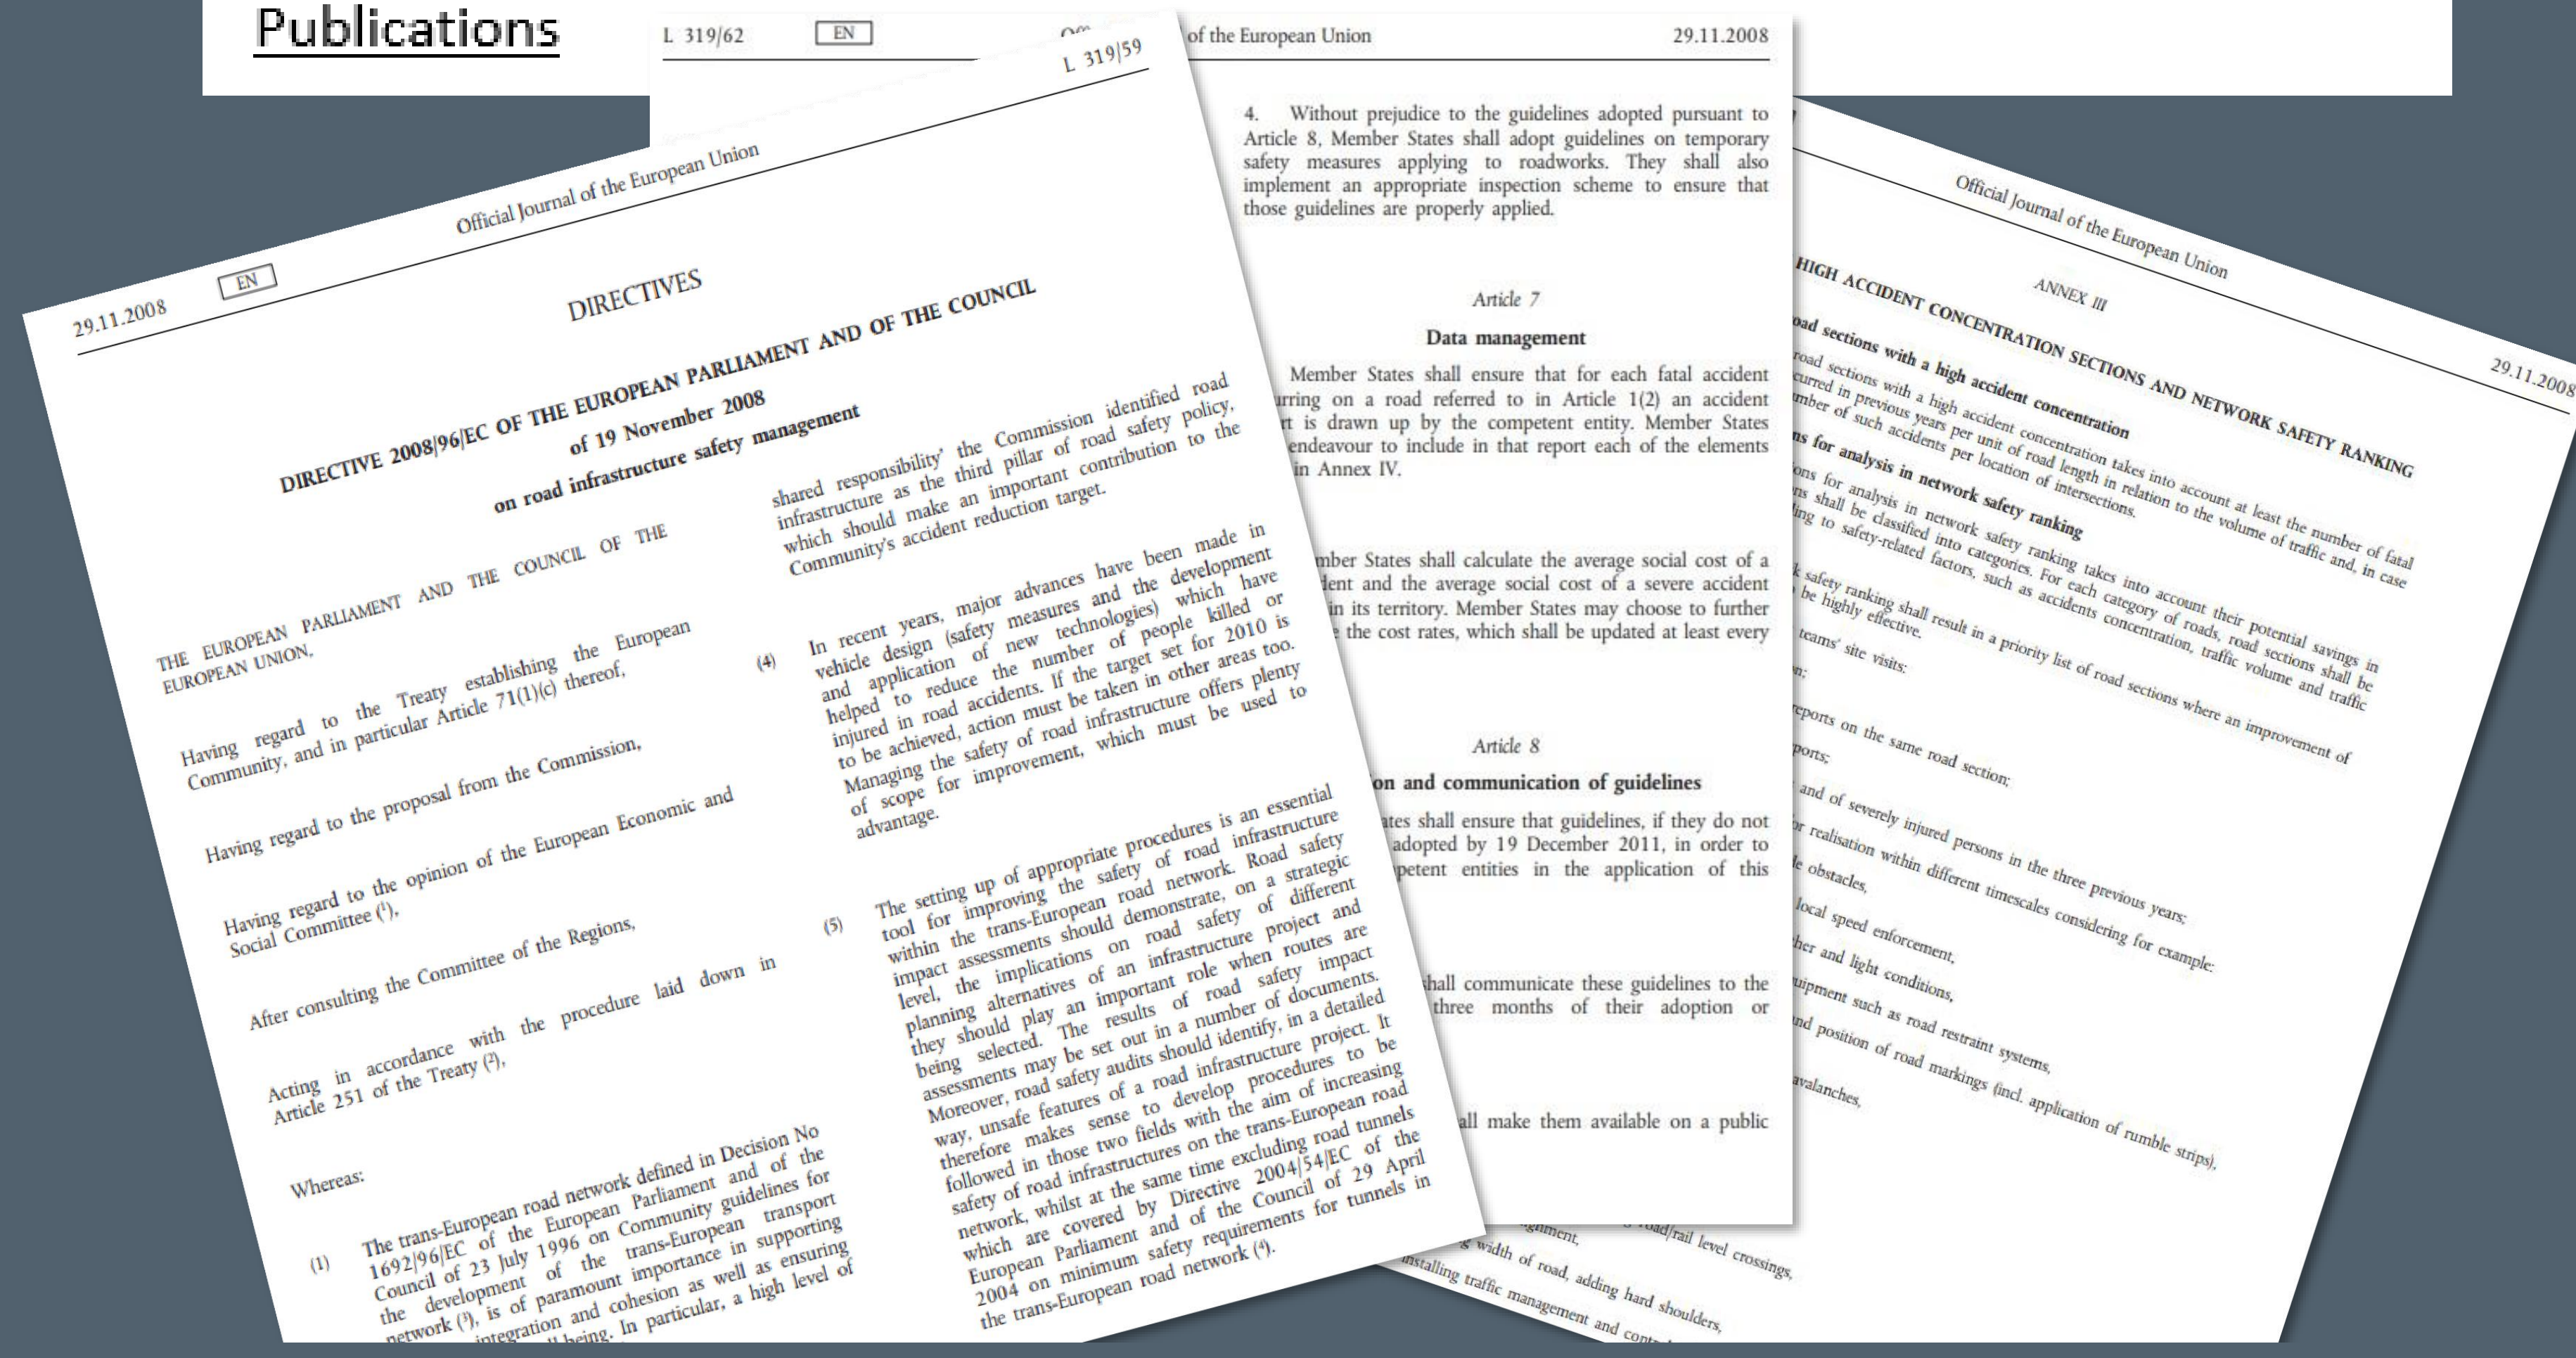

https://ec.europa.eu/transport/road_safety/sites/default/files/move-2019-01178-01-00-en-tra-00_3.pdf

TII Remit to provide Safe Infrastructure

EU RISM DIRECTIVE 2008/96/EC

Transposed into SI 472 of 2011 – TII (NRA) Implementing Body

EU Directive on Road Infrastructure Safety Management (RISM) are met through [TII Publications](#)

New EU RISM 2019/1936 October 2019– to become law by 2024.

- Zero Fatal Collisions **2050**
 - 50% Reduction of **Serious Injuries 2030**
- } *The Vision*
- Extended to all State National Roads (TII already adopted)
 - Major Focus on improving the safety of **Vulnerable Road Users**
Road Safety (growth area)
Across EU motorised road safety steady improvement (but slowing).

Presentation Outline

- What is Safe System?

- Principles & Pillars
- Challenges

- Quality Audits – TII Standards Update
- Questions and Answers

Traditional V Safe System

Traditional - “Why did that a collision occur?”

Safe System Approach - Why was that person so seriously injured in the collision?”

This change in thinking, from collision reduction to injury prevention, represents a significant shift from an engineering perspective to a public health perspective!

WHAT?

What does that mean for Road Safety Engineers and Auditors?

Instead of looking at data to prevent collisions, i.e. it has already happened, ensure that no one is exposed to so much crash force (the force being what actually causes injury or death) that they are seriously injured or killed.

In this thinking the *vulnerability of the human body*

—not the collision itself—

forms the basic parameter in the design of the transportation system.

We already do this Pro-Active v Re-Active (HCL v RSI)!

In collisions involving a bicycle and another vehicle, the most common key contributory factor recorded by the police is **'failed to look properly'** by either the driver or rider, especially at junctions.

Making road safety less dependent on choices of individual road users – *because humans make mistakes*

Presentation Outline

- Questions and Answers

Guiding PRINCIPLES

1. People make mistakes

2. Human physical frailty

3. Shared responsibility

Guiding Principles

1. People make mistakes - Humans will continue to make mistakes, and the transport system must accommodate these. The transport system should not result in death or serious injury as a consequence of errors on the roads.

2. Human physical frailty - There are known physical limits to the amount of force our bodies can take before we are injured. **A 'forgiving' road transport system** - A Safe System ensures that the forces in collisions do not exceed the limits of human tolerance. **Speeds** must be managed – humans not exposed to impact forces beyond their physical tolerance. System designers and operators – accept known limits of the human body in designing and maintaining roads, vehicles and speeds.

3. Shared responsibility - between all stakeholders (road users, road managers, vehicle manufacturers, etc.) to take appropriate actions to ensure that road collisions do not lead to serious or fatal injuries.

4 Pillars of ACTION

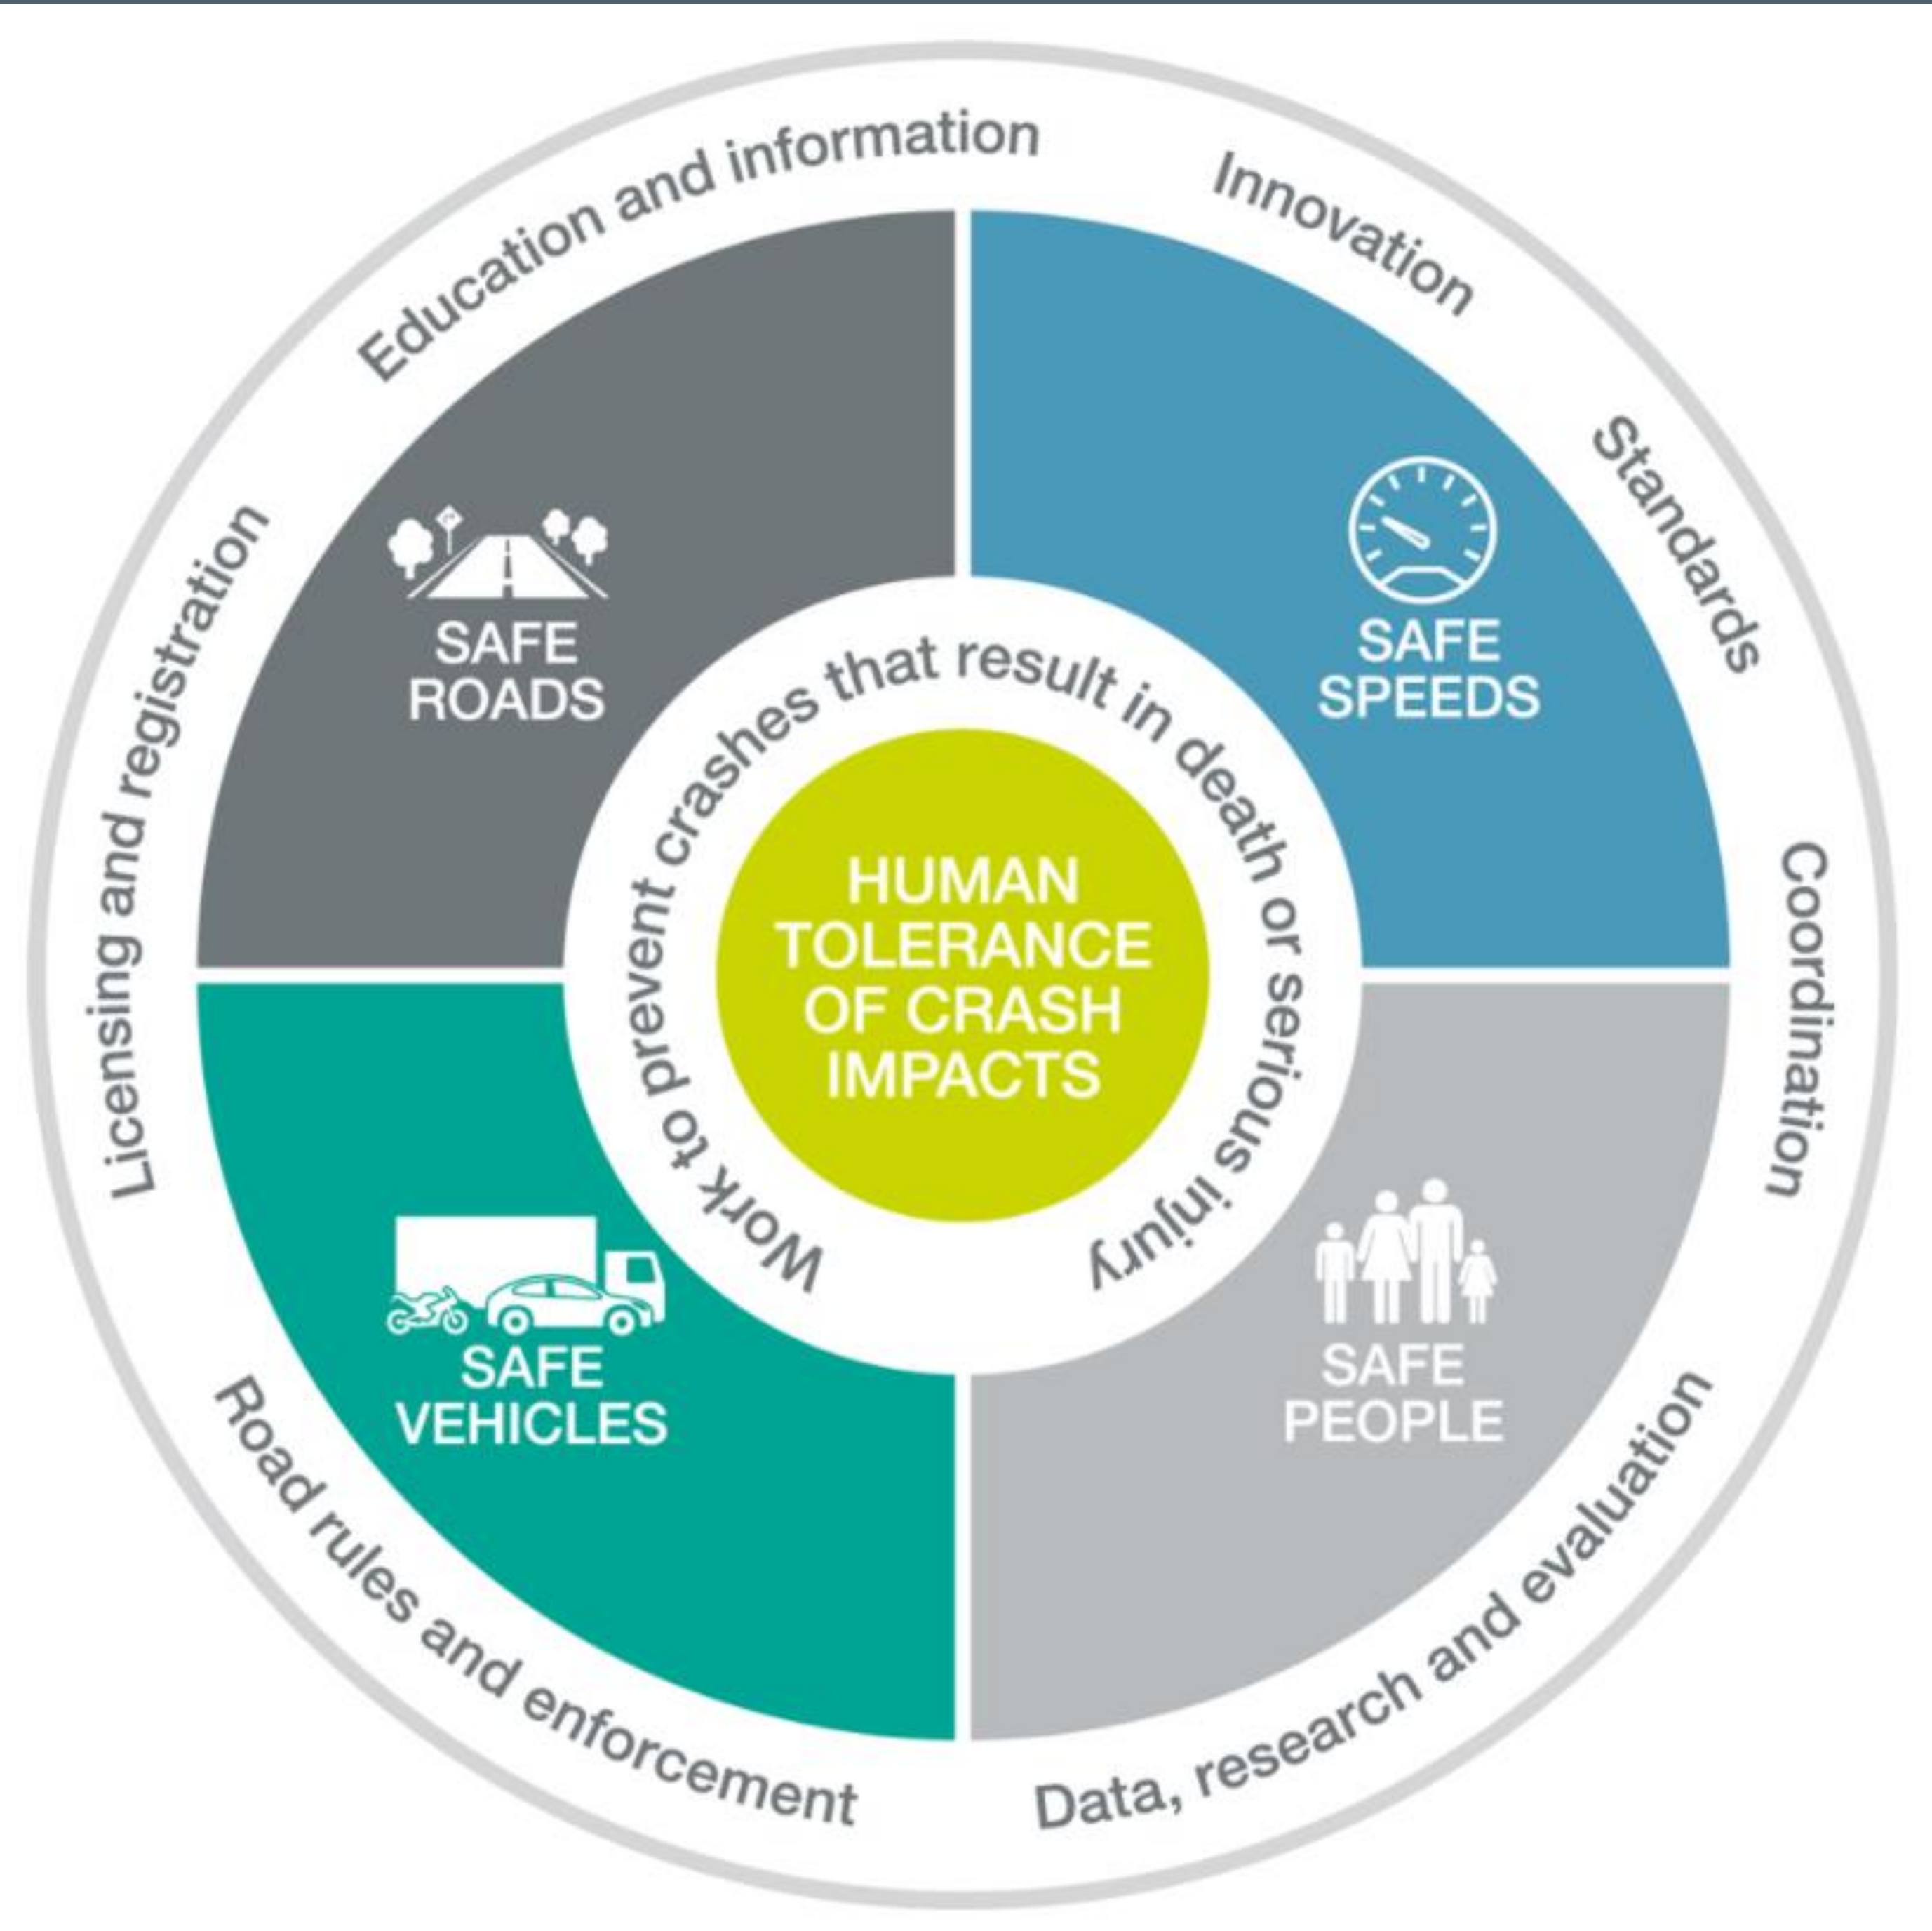

1. Safe Roads

2. Safe Speeds

3. Safe People

4. Safe Vehicles

(5. Post Collision Care e.g. e-Call)

Safe Roads

WHAT MAKES a SAFE SYSTEM?

- A vision
- A set of principles
- A set of pillars for Action
- A set of tools and framework

INPUTS
Implementation

OUTPUTS
The system we want

OUTCOME
2020 targets

Continued, sustained efforts, building on the gains made under Safer Roads, Safer Queensland

VISION
Zero road deaths and serious injuries

What we're measuring

Efforts to improve road safety

On the network

Safety of our system elements: roads and roadsides, vehicles, speeds, people

In our culture

Cultural change among stakeholders

Seriousness of crashes

What we want to see

Our efforts are innovative, evidence-based, appropriate and timely

Each system element is becoming increasingly safer

Increasingly, stakeholders are reporting cultural change that has affected their actions

Ongoing reduction in fatal and hospitalised casualties to meet or exceed targets

How we'll measure it

Queensland Road Safety Action Plan implementation

- Example of data sources:
- Speed survey data
 - Regular evaluations of key road safety initiatives
 - Infrastructure delivery data
 - Other sources

- Example of data sources:
- Attitudinal surveys
 - Other sources

Road crash and casualty data

Safety Performance Indicators / Key Performance Indicators

Shared Responsibility – Framework – SMART – Monitoring

Presentation Outline

- What is Safe System?
- Ireland & EU
- Traditional V Safe System Approach
- Principles & Pillars
- **Challenges**

- Quality Audits – TII Standards Update
- Questions and Answers

Challenge

- **Societal** – Aging populations (higher vulnerability to injury), transport equity, gender equity, accessibility for all...
- **Mobility Trends** - requires **renewed focus** and awareness about Active Travel needs – addressing the road safety dichotomy that between protected and un-protected user.
 - Understanding transport **disruptors** (e.g. e-mobility) – *transformative potential if safe!*
- Increased use of **technology** (e.g. Safe Smart Highways)
- Introducing **new** connected and autonomous vehicles (and flying ones?!)

- **Costs** – safe limits / safe not safer!
- Level of ambition at the **Project level**
- Scope, quality and level of systemic adoption and acceptance of SS – All stakeholders/**Silos**
- Level of knowledge about all users safe limits / **Design** needs
- Quality of implementation and **institutional/professional delivery** of SS
- Wider accountability for outcomes **LINK** -Climate Action and Sustainable Transport and Mobility.

Challenge

4 Pillars of ACTION

1. Safe Roads

2. Safe Speeds

3. Safe People

4. Safe Vehicles

(5. Post Collision Care e.g. e-Call)

Change – Auditors & Designers

- Stronger focus on results and performance
 - Pro-Active not Re-Active
- Focus on deaths AND serious injury performance (all injury?)
- Attention and knowledge about underlying operational safety - latent risk (the Swiss Cheese)
 - Work in progress – scope for innovation

Challenge – Auditors & Designers

- Do our current ways of working facilitate collaborative working with all necessary stakeholders? (Shared responsibility)
- Do we currently LINK sustainability, acceptably and affordably?
- Recommendations for SS will need some hard choices -*reduced speeds and cost of segregation as standard?*

DMURS – Quality Audits

DMURS Street Design Audits consists of a series of short tables used to cross check a design against DMURS principles.

Who should carry out a Quality Audit?

The Quality Audit Report should be carried out by the **Design Team**. The Design Team may include and benefit from having an independent appraisal or be carried out by person(s) *with a broad skill set*.

It is a documented record of the process of how decisions were made.

The final Quality Audit signed by the Project Manager.

Road Safety Audits (including Risk Assessment).

Pedestrian and cycling audits
(e.g. Non-Motorised User Audit, Walkability Audit, Cycle Audit).

Mobility and visually impaired users audits
(e.g. Access Audit, Universal Design Audit, Wheelchair Audit).

Visual quality audits (e.g. Place check, Materials Audit)

Community audits (e.g. Community Street Audit).

Heritage Assessments

Permeability (NTA Guidelines)

Quality Audit - checks to promote 'best practice' design solutions.

Safety Auditing processes in Ireland are well understood.

Urban projects may/should have several other audits/assessments to fully engage with the complexity of issues when designing streets and street networks.

The Quality Audit process integrates:

1. INDEPENDENT road safety auditing processes (TII Standards)
2. A multidisciplinary decision record and suit of assessments to produce good street design. (Co-benefits!!!! for safety)

Street Design Audit completed and signed off by Principle Designer/Project Manager - NOT the ROAD SAFETY AUDITORS!

Should not be limited to the SITE – RSA are limited to scope set by Client
