

Transport Infrastructure Ireland's (TII's) purpose is to provide sustainable transport infrastructure and services, delivering a better quality of life, supporting economic growth and respecting the environment. With Sustainability as a core value of our Statement of Strategy, we prioritise sustainability in our decision making, playing our part in addressing the climate and biodiversity crises. Our Sustainability Implementation Plan ensures TII is well positioned to deliver its purpose as a leader in sustainable transport.

Guided by policy, TII's sustainable development ambition and impact has accelerated through our programme of work to influence positive change. Our work demonstrates a clear focus on decarbonisation, climate adaptation, circular economy, biodiversity and sustainable procurement, to ensure that Ireland's national road and light rail infrastructure is safe and resilient, delivering better accessibility and sustainable mobility for people and goods.

TII is guided by six sustainability principles to focus on key priority areas for sustainable development within our organisation;

## 1. Provide effective, efficient and equitable mobility

Enable compact urban growth and regional accessibility through networks and services that support more efficient journeys, more effective connectivity and increased accessibility.

## 2. Enable safe and resilient networks and services

Enable safe, secure, accessible and inclusive travel through the provision of transport networks, systems and services that are resilient to future change.

## 3. Collaborate for a holistic approach

Develop smart and sustainable assets and services through innovating and improving the planning, design, construction, operation and maintenance of the transport network, increasing collaboration and systems-thinking to seek mutual gains and mitigate negative externalities.

## 4. Deliver end-to-end improvements.

Deliver enhanced whole life-cycle value through impact and influence on stakeholders, partners and suppliers.

## 5. Transition to net zero

Reduce the carbon impact of construction, operation and use of the transport network through responsible use of resources, reuse and repurposing, as well as driving the net-zero transition and enabling customers to make more sustainable choices.

## 6. Create total value for society

Maintain and enhance the balanced delivery of economic, environmental and social value through robust planning, rigorous appraisal and decisions that prioritise sustainability.

This statement is a reflection of our current commitments and a promise of our ongoing dedication to sustainability.
