

Location Reference Indicator (LRIs) Signs & Location Reference Markings (LRMs)

Location Reference Indicator (LRI) signs and Location Reference Markings (LRMs) are being deployed along motorway/dual carriageway sections of the national road network to assist road users accurately communicate where they are. In the event of an incident or breakdown, the road user can relay the information contained on the LRI sign or LRM to describe where you are. LRI signs/LRM markings will mean you can in the event of an incident inform emergency services exactly where the incident has occurred

To report a road traffic accident dial **999** or **112**

To report debris call the Motorway Traffic Control Centre on **0818 715 100**

What information is on a LRI sign ?

All LRI signs contain 3 lines of information that inform the road user of;

- The route number on which you are travelling
- The direction of travel, this can only be one of N, S, E or W
- The distance from the start point of the route

LRI signs are located on the nearside verge and are typically spaced every 500 metres although this may be modified at some locations to avoid inappropriate sites.

Location Reference Markings (LRMs)

Location Reference Markers (LRMs) supplement the LRI signs. Location reference Markers are painted in the hard shoulder parallel to the road. The LRM indicates the route and the direction of travel along with distance from the start of the route. In addition the LRMs indicate the direction to the nearest emergency telephone. An example LRM is indicated in Figure 2 below. LRMs are painted in the hard shoulder every 100 metres.

Where will LRI signs and LRM markings be ?

LRI signs and LRM markings will typically appear on motorway/dual carriageway sections of the national road network, as outlined in Figure 2.
