Definition of Road Safety Impact Assessment (RSIA):

Road Safety Impact Assessment (RSIA), as defined by the European Directive, is a strategic comparative analysis of the impact of a new road or a substantial modification to the existing network on the safety performance of the road network.

HD 18 defines RSIA as the strategic comparative analysis of the impact of different planning alternatives for a new road or a substantial modification to the existing network on the safety performance of the road network.
Road Safety Impact Assessment

*Purpose of Road Safety Impact Assessment (RSIA):*

- Demonstrate, on a strategic level, the implications on road safety of different planning alternatives of an infrastructure project.
- Provide all relevant information necessary for the selection of the solution;
- Provide a comparative analysis of the road safety implications of each alternative considered;
- Provide an evaluation of the road safety benefits and dis-benefits arising from each alternative.

**RSIA does not replace or preclude Road Safety Audit, which is carried out by a team independent of the design process.**
Road Safety Impact Assessment

Timeline of RSIA

• Early planning stages
• During design phases up to scheme planning approval

Process of RSIA

• Appointment of competent RSIA team
• Site visit by all team members at same time
• Assessment of the impact of the scheme on all road users including vulnerable road users
• Comparative road safety impact assessment of the effects of each alternative
• Ranking of alternatives in terms of road safety considerations
• RSIA Report
• Final Report to Design Team Leader to inform option selection
Road Safety Audit

Road Safety Audit is defined as the evaluation of a road scheme during design, construction and early operation, to identify potential safety hazards which may affect any type of road user, and to suggest measures to eliminate or mitigate those problems. (ref. HD 19)

The earliest stage of Road Safety Audit is Stage F which is at Route Selection prior to route choice.

Where a choice of routes is available, Stage F audits should be carried out in two phases.

- Phase 1 should be a comparative assessment of the routes from a road safety point of view.
- Phase 2 of the audit will be carried out on the chosen route, in the standard problem and recommendation format. (ref. HD 19)
Road Safety Audit

Purpose of Road Safety Audit (RSA):

• Identify potential safety hazard with the scheme design or construction as they could affect road users.

• Consideration of road safety under all operating conditions and for all road users;

• Provide a recommendation for dealing with identified hazard;

• Ensure future operational safety of the scheme
Road Safety Audit

The earliest stage of Road Safety Audit is Stage F which is at Route Selection prior to route choice.

Where a choice of routes is available, Stage F audits should be carried out in two phases.

- Phase 1 should be a comparative assessment of the routes from a road safety point of view.
- Phase 2 of the audit will be carried out on the chosen route, in the standard problem and recommendation format. (ref. HD 19)
## Key Differences

<table>
<thead>
<tr>
<th>Road Safety Impact Assessment</th>
<th>Road Safety Audit</th>
</tr>
</thead>
<tbody>
<tr>
<td>Assessment by design team</td>
<td>Assessment by independent team</td>
</tr>
<tr>
<td>Carried out at early concept &amp; feasibility stages</td>
<td>Carried out at each stage of design and construction</td>
</tr>
<tr>
<td>Key component in selection of route choice or option choice</td>
<td>Less ability to alter strategic decisions during later stage audits</td>
</tr>
<tr>
<td>Phase 2 RSIA available on <a href="http://www.n6galwaycity.ie/">http://www.n6galwaycity.ie/</a></td>
<td>Phase 2 RSA Part 1 &amp; Part 2 available on <a href="http://www.n6galwaycity.ie/">http://www.n6galwaycity.ie/</a></td>
</tr>
</tbody>
</table>

*End result - Safer road infrastructure by proper consideration of road safety from the earliest concept stage*
